

Myshroom® Summary

MyShroom.com sells a superior food composed of proprietary hybrid strains of medicinal mushroom species it grows. The strains used are not commercially available from other growers for national and international distribution. The products are produced for integrative health care as evidence-based, complementary protocols. The mushrooms are grown in a sterile, clean room facility with no soil and are certified organic. Once grown, the medicinal mushrooms are dried and processed into a powdered form, blended and packaged as proprietary blends.

MISSION

Our corporate mission is to grow hybrid strains of medicinal mushrooms, formulate blends and disseminate these products into the healthcare market infrastructure. We provide education to bridge the gap between the research knowledge of our products and its use in clinical practice for alternative protocols.

PROVIDING EDUCATION

We are creating a market through consumer and health care professionals' education to spread the use of our products as non-invasive protocols to ultimately become standards of care. We provide excellent education and training for the consumer and health care professionals so that they can become informed users of the various medicinal mushroom strains developed from university laboratories that were used in their controlled studies. We grow the same strains of the various species that they created.

We are expanding capacity to support an ever-increasing demand.

MyShroom.com currently sells product as a food, so no FDA regulations for drugs or nutraceuticals apply other than to register with the FDA. No claims are made that the product cures anything.

WHAT SETS US APART

Currently, no manufacturers sell our proprietary fungi products and none sell extensively to health care professionals, hospitals and medical food services and: (1) We have proprietary hybrid strains with proven efficacy in supporting the immune and nervous systems (2) No manufacture has our quality and safety standards (3) No manufacture uses our property organic substrates to grow mushroom strains on and this is protected by our own IP (4) We are the only commercial grower of fungi in the world that grows, processes and packages in completely sterile clean rooms (5) All personnel and scientists wear fully encapsulated hazmat suits in the growing, including in the

hydration, processing and packaging of the finished products. (6) No personnel physically handles the products or breathes the same air that the fungi grow in from the beginning to the end. (7) Our products have a shelf life of seven years or more (8) our organization provides follow up personally with every patient worldwide that our health care resellers provide to patients from our experienced customer support team (9) we require all resellers to document and provide the names of all customers/patients/physicians or others that use the products, we register them and a health summary is confidentially kept (10) We follow all HIPAA laws in the USA (11) All resellers must qualify in order to sell the fungi products providing appropriate certifications, product liability insurance and references under a mutual confidentiality agreement. (12) We have a recall program (13) We use an independent lab to verify quality.

All the scientists and collaborators involved have done extensive research, and some since 1971. The company's formulas and products therefore have no direct competition because of the unique strains, proprietary formulas, organic substrates used, methods of processing and the quality standards for the growing and harvesting of the hybrid mushroom strains.

Most medicinal mushroom products are extracts made from mushrooms of unknown origins and grown on soil or unknown substrates. Soil and non-sterile substrates used in production increase the risk of viral and bacterial contamination, the incorporation of heavy metals and toxins, and higher product variability.

The organization is expanding the growing capacity of the substrates used for the food for the mushroom strains we grow on and for the growing of the strains themselves.

We are planning and setting up to complete clinical trial studies with our collaborators. The reason for this is so that the Insurance industry would provide reimbursement for the cost of the products when used as a protocol with those approved specific disease from our clinical studies.

PRODUCTS

[MyShroom® blends](#) harness the newly realized potential of newly created medicinal mushroom strains from university laboratories that provide nutritional support to the body's immune and nervous systems.

Proprietary blends are: 1) [Immune Health](#), 2) [Neural & Cognitive Health](#), 3) [Blood Sugar Health](#), 4) [Liver Health](#).

The packaging for each product comes in three sizes:

- (590 grams), 1.3 pounds/20.8 oz. [236 teaspoons] in a container
- (295 grams) .65 pounds/10.4 oz. [118 teaspoons] in a container
- (196 grams) .43 pounds/ 6.9 oz. [78 teaspoons] in a container

The production of our mushroom blends takes 70 days to grow, process and package all of the strains. There are 5 growing cycles per cubic foot of growing space in a year.

SCIENCE

The science behind the cultivation and blending of our medicinal mushrooms has been assembled by the [Quantum Health Discoveries Institute \(quanthealth.org\)](http://quanthealth.org), and is based on selected case studies, research articles and peer-reviewed literature contained within the National Library of Medicine.

The benefits of mushroom compounds on different clinical conditions have attracted the interest of the scientific community in the last decade in order to understand the molecular mechanisms. This research is complicated by the fact that there are vast amounts of molecules found in the various species and hybrid new strains, making it literally impossible to know all of the mechanisms and pathways leading to favorable outcomes by ingesting these mushroom products.

Myshrooms are not intended to diagnose, treat, cure, or prevent disease. All statements have not been evaluated by the FDA
